

create a jQuery reference manual, every concept that will be needed 90% of the time and leave the unessential 10%, keep it concise yet helpful and give resource links in the bottom and give code snippets for each concept.

Here is a concise yet comprehensive jQuery reference manual covering the essential 90% of concepts you'll need most of the time, with code snippets for each concept. The less essential 10% (advanced or rarely used features) is omitted for clarity and brevity.

jQuery Reference Manual (Essential 90%) with Code Snippets

1. Including jQuery

Add jQuery to your HTML to use it:

```
<script src="https://code.jquery.com/jquery-3.6.0.min.js"></script>
```

2. Document Ready

Ensure your code runs after the DOM is fully loaded:

```
$(document).ready(function() {  
    // Your code here  
});  
  
// Or shorthand:  
$(function() {  
    // Your code here  
});
```

3. Selectors

Select HTML elements using CSS-like syntax:

- By ID:

```
$('#myId')
```

- By Class:

```
$('.myClass')
```

- By Tag:

```
$('p')
```

- Multiple selectors:

```
$('#div, .myClass')
```

4. DOM Manipulation

- **Get/Set Text:**

```
// Get text
var text = $('#myElement').text();

// Set text
$('#myElement').text('New text');
```

- **Get/Set HTML:**

```
// Get HTML
var html = $('#myElement').html();

// Set HTML
$('#myElement').html('<b>Bold text</b>');
```

- **Get/Set Value (form elements):**

```
// Get value
var val = $('#inputField').val();

// Set value
$('#inputField').val('New value');
```

- **Add/Remove Elements:**

```
// Append element inside
$('#container').append('<p>Appended paragraph</p>');

// Remove element
$('#oldElement').remove();
```

- **Add/Remove/Toggle Classes:**

```
$('#myDiv').addClass('active');
$('#myDiv').removeClass('active');
$('#myDiv').toggleClass('active');
```

- **Get/Set Attributes:**

```
// Get attribute
var src = $('#myImage').attr('src');

// Set attribute
$('#myImage').attr('src', 'newimage.jpg');
```

- **Change CSS:**

```
$('#myDiv').css('color', 'red');
```

5. Event Handling

- Attach event handlers:

```
$('#myButton').on('click', function() {
    alert('Button clicked!');
});
```

- Shortcut event methods:

```
$('#myButton').click(function() {
    alert('Clicked!');
});
```

- Common events: click, mouseenter, mouseleave, keydown, submit

6. Effects and Animations

- Show/Hide elements:

```
$('#myDiv').show();
$('#myDiv').hide();
$('#myDiv').toggle();
```

- Fade effects:

```
$('#myDiv').fadeIn();
$('#myDiv').fadeOut();
$('#myDiv').fadeToggle();
```

- Slide effects:

```
$('#myDiv').slideDown();
$('#myDiv').slideUp();
$('#myDiv').slideToggle();
```

- Custom animation:

```
$('#myDiv').animate({opacity: 0.5, height: '50px'}, 1000);
```

- Chaining methods:

```
$('#myDiv').fadeIn().addClass('active').slideDown();
```

7. AJAX (Asynchronous HTTP Requests)

- Basic GET request:

```
$.get('url', function(data) {
    console.log(data);
});
```

- Basic POST request:

```
$.post('url', {key: 'value'}, function(response) {
    console.log(response);
});
```

- Full AJAX request:

```
$.ajax({
    url: 'url',
    method: 'GET', // or 'POST'
    data: {key: 'value'},
    success: function(response) {
        console.log('Success:', response);
    },
    error: function() {
        console.log('Error occurred');
    }
});
```

8. Utility Functions

- Iterate over elements:

```
$('#li').each(function(index, element) {  
    console.log($(element).text());  
});
```

- Get or set CSS properties:

```
var color = $('#myDiv').css('color');  
$('#myDiv').css('background-color', 'yellow');
```

Summary Table of Key jQuery Methods

Category	Method(s)	Description
Selectors	<code>\$('#id')</code> , <code>\$('.class')</code> , <code>\$('tag')</code>	Select elements by ID, class, or tag
DOM Manipulation	<code>.text()</code> , <code>.html()</code> , <code>.val()</code> , <code>.attr()</code> , <code>.append()</code> , <code>.remove()</code> , <code>.css()</code>	Get/set content, attributes, add/remove elements, style
Events	<code>.on()</code> , <code>.click()</code> , <code>.hover()</code>	Attach event handlers
Effects	<code>.show()</code> , <code>.hide()</code> , <code>.fadeIn()</code> , <code>.slideUp()</code> , <code>.animate()</code>	Show/hide elements with animation
AJAX	<code>\$.get()</code> , <code>\$.post()</code> , <code>\$.ajax()</code>	Perform asynchronous HTTP requests
Utility	<code>.each()</code> , <code>.css()</code>	Iterate elements, manipulate CSS
